

Extension scheduler_brokr

This extension deploys the schedulers commonly known as `electron_kogs_scheduler` and `electron_knos_scheduler` to the electron stack. These schedulers are the default schedulers for Lite antennas, and are used to schedule the legacy controller which in turn configures the kratos backend and Orbital ACU MW before and after a contact. The image below shows how the schedulers are deployed by default. By specifying the variable `brokr_knos_scheduler_mode: 'BE_KNOS'`, `electron_knos_scheduler` does not only shadow KNOS, and will have a different behavior.
